STB Control

- In its Corporate Plan for the MTEF period 2012-2015, SENTECH noted that the Minister had cautioned that the country's commitment to complete analogue switch-off by 2013 may not be met;

- The Minister however made a commitment that there will be a launch during the third quarter of the year ahead; the key requirements of the launch are:
 - Passage of the amended BDM Policy by the Minister
 - Passage of strategies dealing with STB ownership support and the STB manufacturing by Cabinet
 - Passage of the amended DTT migration regulations by ICASA
 - Network coverage in all provinces of the country by SENTECH
 - Content readiness by DTT broadcasters (SABC, etv, Mnet and Community broadcasters)
 - Availability of STBs in the market

- In consideration of these challenges, the Department of Communications, together with its SOE's have recommended that a staggered provincial DTT rollout be implemented;

- SENTECH has since reviewed its DTT rollout plan to enable a rolling Provincial infrastructure rollout programme. SENTECH believes that this strategy will ensure that the country has a common implementation and communication plan for DTT.

STB Control

| | Actual Population | 60% DVB-T2 Population Coverage | | | Full Rollout DVB-T2 Population | |
|----------------------|-------------------|--------------------------------|--------------|--------------|--------------------------------|------------|
| Gauteng | 22% | 10 718 135 | 21.44% | 96% | 22% | 97% |
| North West | 6% | 2 954 486 | 5.91% | 92% | 6% | 93% |
| Mpumalanga | 7% | 1 184 794 | 2.37% | 33% | 7% | 90% |
| Limpopo | 11% | 3 229 438 | 6.46% | 59% | 9% | 83% |
| Eastern Cape | 13% | 2 079 638 | 4.16% | 31% | 10% | 74% |
| Free State | 6% | 1 304 773 | 2.61% | 46% | 5% | 88% |
| Northern Cape | 2% | 329 943 | 0.66% | 30% | 2% | 68% |
| Kwazulu-Natal | 21% | 4 834 159 | 9.67% | 45% | 19% | 89% |
| Western Cape | 10% | 3 814 336 | 7.63% | 73% | 8% | 77% |
| TOTAL | 100% | 30 449 701 | 60.9% | 60.9% | 87% | 87% |

* Based on Statistics SA's 2010 population estimates

- The current coverage is based on plans that were made in 2006;
- However, the DTT coverage still touches every province even though there is a skew towards urban areas;
- The provincial rollout programme moving forward will ensure that moving forward, there is always a balance between rural and urban areas.

| | Rural | Urban |
|------------------------------|------------|------------|
| Launch (60% roll-out) | 12% | 49% |
| Gauteng | 9% | 91% |
| Limpopo | 82% | 18% |
| Free State | 22% | 78% |
| Mpumalanga | 51% | 49% |
| Kwazulu Natal | 43% | 57% |
| Eastern Cape | 52% | 48% |
| North West | 55% | 45% |
| Western Cape | 6% | 94% |
| Northern Cape | 26% | 74% |
| TOTAL | 36% | 64% |

➡ STB Control

- The amended Broadcast Digital Migration (BDM) policy, issued under government gazette no. 35014, requires that the STB includes a STB control system to protect the investment by government in subsidy scheme, as well as the electronic manufacturing industry;
- SANS 862 states that the main elements specified for security within the STB control function are:
 - a secure over-the-air software and bootstrap loader;
 - a mechanism to prevent STB decoders from functioning in non-RSA DTT networks;
 - STB control system that will enable mass messaging.
- Furthermore, SANS 862 states that STB decoder manufacturers are responsible for the implementation of the security requirements specified by the free-to-air individual broadcasting service licensees in South Africa and for the proper configuration of the chipsets. In this regard, manufacturers can obtain the security requirements from the free-to-air individual broadcasting service licensees in South Africa or from their appointed agents (trusted third parties).
- A directive from Minister mandated SENTECH to establish and operate the STB control system. SENTECH understands that the scope of the directive does not necessarily include the STB User Interface (UI) and the Subscriber Management System (SMS) operations other than that for STB control operations. SENTECH will be upgrading its existing conditional access system (CA) to implement the STB control mechanism and the mechanism will constitute a combination of a robust conditional access system (CAS) to allow full control of STBs by the operator for activation, revocation, geographical zone locking, messaging and a secure bootloader. This design will meet the requirements of the BDM policy and the SANS 862 and SENTECH hopes, through the ongoing negotiations, that the design will also meet the requirements of the broadcast licensees as specified in SANS 862.

| Set Top box control funding requirements | Amount ZAR |
|--|---------------|
| CA system upgrade | 1 000 |
| IMS hardware and software upgrade and adaptation | 1 500 |
| System adaptation for DTT over DTH platform | 500 |
| Business TV customer migration | 500 |
| Smartcard and ProCAM | 3 000 |
| Annual maintenance costs | 3 000 |
| 60 man-days system engineers | 500 |
| Total | 10 000 |

Broadcast Digital Migration Policy (Amended) states that STBs will:

5.1.2.7 include an STB control system that will protect the investment by Government in its STB subsidy scheme, as well as the electronic manufacturing industry. A robust STB control will benefit consumers by ensuring that they do not have to own multiple boxes. The STB control system provided will be interoperable with other systems;

5.1.2.8 enable access to a secure bootloader mechanism by a Government entity or agency or any entity so designated by Government to ensure access to the STBs control system by future broadcast licensees on the DTT platform.

SABS STB National Standard states that:

Introduction The STB decoder should also be capable of providing interactive services, and control means are required to prevent subsidized STB decoders from being used outside South Africa.

5.1 The minimum hardware and software requirements for STB decoder control shall be implemented in accordance with the STB decoder control specification for free-to-air DTT in South Africa. Manufacturers can obtain the STB decoder control specification from the incumbent terrestrial free-to-air broadcasting service licensees in South Africa or their appointed agents (trusted third parties)

Government has mandated SENTECH, in terms of the BDM Policy, to make use of its existing infrastructure to implement STB control for the DTT STBs.

| Set Top box control funding requirements | Amount ZAR |
|--|---------------|
| CA system upgrade | 1 000 |
| IMS hardware and software upgrade and adaptation | 1 500 |
| System adaptation for DTT over DTH platform | 500 |
| Business TV customer migration | 500 |
| Smartcard and ProCAM | 3 000 |
| Annual maintenance costs | 3 000 |
| 60 man-days system engineers | 500 |
| Total | 10 000 |

During the current financial year, SENTECH submitted a business case for to the Department for the funding of the STB control system upgrade.

The request was made as an adjustment to the budget allocated to SENTECH for the financial year 2012/2013. Current indications are that the additional request may not be accommodated in this current financial year and as a result, the SENTECH Board has agreed to use the current DTT project funds to fund the upgrade, whilst the company awaits budget allocations for the next MTEF cycle.

In this regard, an order for the upgrade has been issued and SENTECH should be in a position to support both the STB RFP process and also meet the timelines for having the STBs available in the market.

SENTECH SOC Limited

Rollover Request FY2013 (R' million)

| Project (R' million) | Capital | Interest earned | Total |
|---|----------------|------------------------|--------------|
| Digital Terrestrial Television (DTT) | 312 | 40 | 352 |
| Capital for infrastructure | 233 | 32 | 265 |
| Dual Illumination | 79 | 8 | 87 |
| Broadband Network | 457 | 127 | 584 |
| NWBN Project | 439 | 121 | 560 |
| Eassy Project | 18 | 6 | 24 |
| 2010 World Cup Soccer | 57 | 28 | 85 |
| Community Broadcasters | 4 | 6 | 10 |
| Total project funds | 830 | 201 | 1 031 |

Treatment of Interest earned

- In a letter dated 07 Dec 2011, Sentech communicated to the Minister that interest earned on grant funds is recognised as income in the Company's accounting records, with the exception where NT has directed otherwise when funds were received;
- This accounting treatment is in line with the company's accounting policy for the recognition of interest earned and has been applied consistently in all other previous years; the external auditors have raised a concern however that NT has not formally given approval of this accounting treatment of the interest on grants; should NT rule otherwise, then SENTECH's audited financial statements may need to be restated from as far back as 2006;
- Part of the above exception includes the R32m earned on DTT funds where NT directed that it be utilised to fund the capital portion of the project;

FY2015 allocation should be received in FY2014 to accomplish Dec 2014 project completion target.

Digital Terrestrial Television (DTT) Migration (R' Million)

| Financial Year | 2013 | 2014 | 2015 |
|------------------------|------|------|------|
| Dual illumination opex | 95 | 106 | 107 |

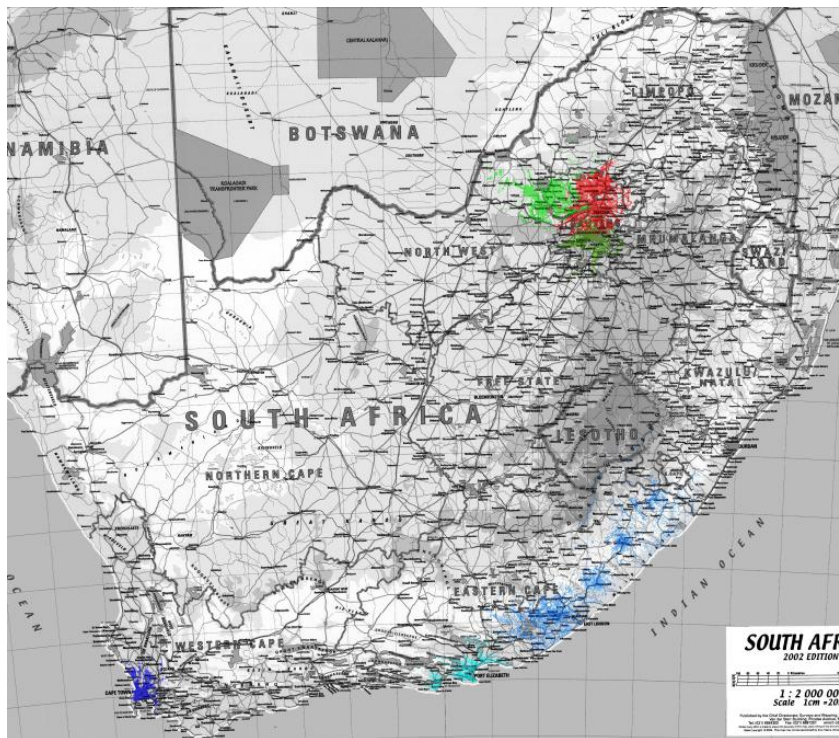

- The DTT project seeks to migrate from the analogue to the digital broadcasting system by June 2015 as sanctioned by the International Telecommunication Union (ITU) to which the South African government is a member. Sentech has been transmitting two signals since November 2008, i.e. analogue and digital to broadcasters and will continue to do so until analogue switch off. The dual illumination funding request is to cover the incremental costs arising from dual illumination over the MTEF period.
- The above requisition assumes analogue switch off in June 2015.
- In order to avoid charging broadcasters for the digital signal until analogue switch off, it is vital that Sentech receives the requisite additional funding allocation of R213 million (R106m & R107m in FY2014 and FY2015 respectively) as shown above.

- SENTECH commits that it is ready and able to support a national technical launch of DTT during the third quarter of the year, within the existing DTT coverage areas for terrestrial services;
- SENTECH further submits that in line with the requirements of the amended BDM Policy, it is able to the simultaneously demonstrate reception of digital channels via direct-to-home satellite;
- In particular, SENTECH notes that such a demonstration can coincide with the national technical launch and further provide demonstration of digital free-to-air television working simultaneously in urban and rural areas of the country;
- SENTECH is also working towards providing 80% coverage by the end of the financial year, with full conversion of sites in Limpopo, Free State, Mpumalanga and Kwazulu Natal and conversion of additional sites in Eastern Cape, North West and Western Cape.

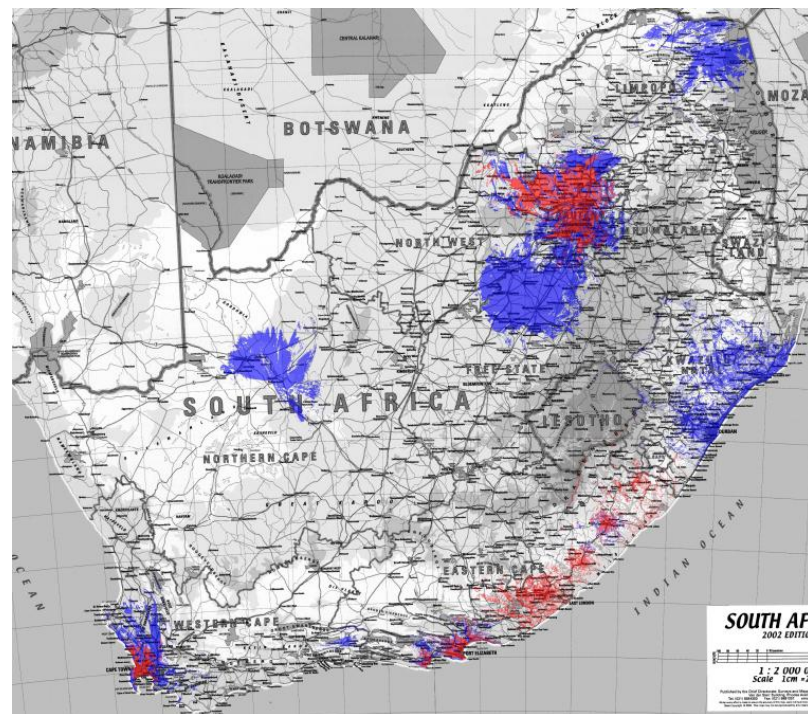

The soft launch of terrestrial reception can be at any of the green places shown above.

Simultaneously, the soft launch of satellite reception can be at any of the white places shown above. The core of the SKA area already does not have coverage and the demonstration/soft launch can confirm non-interfering reception of the digital broadcasting services.

Current analogue coverage:

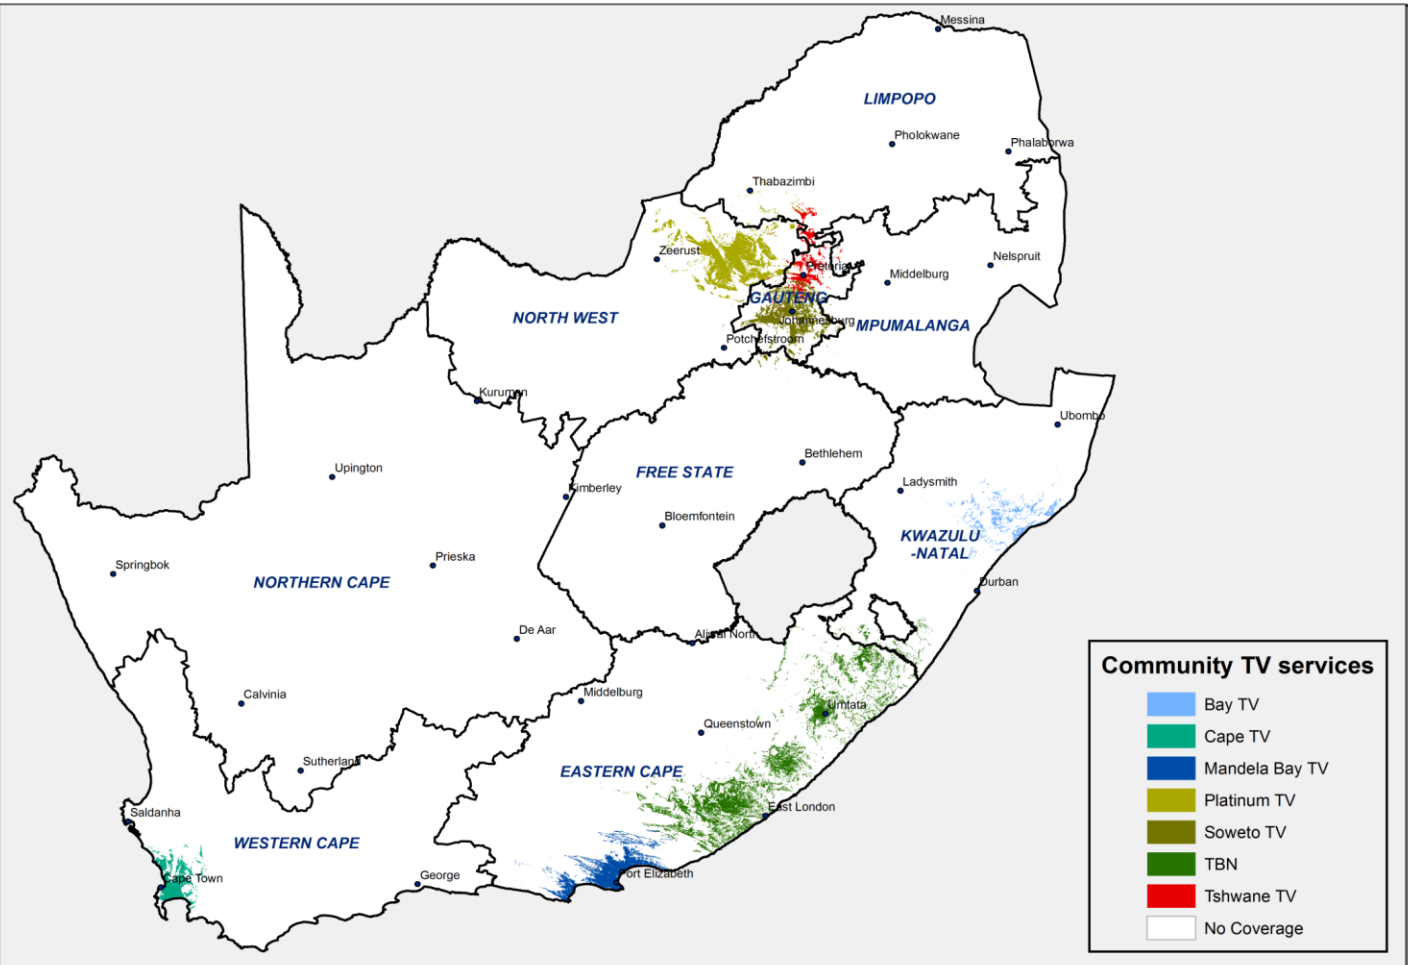

- Limited to metropolitan areas
- TBN has much wider coverage in EC

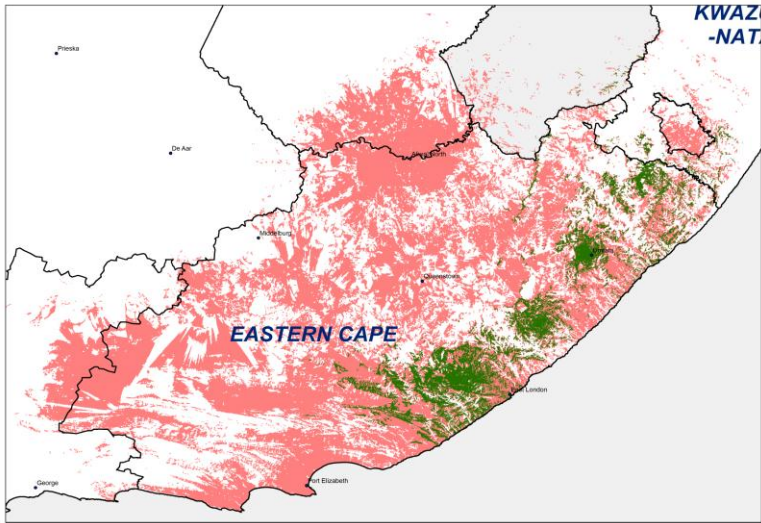

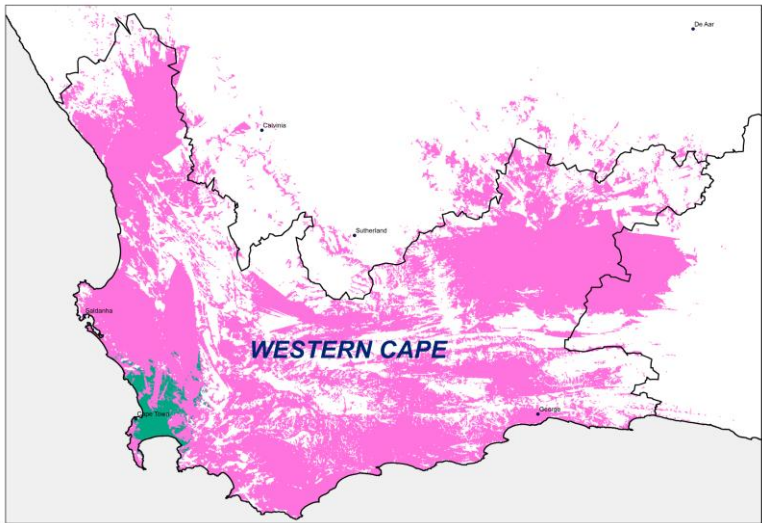

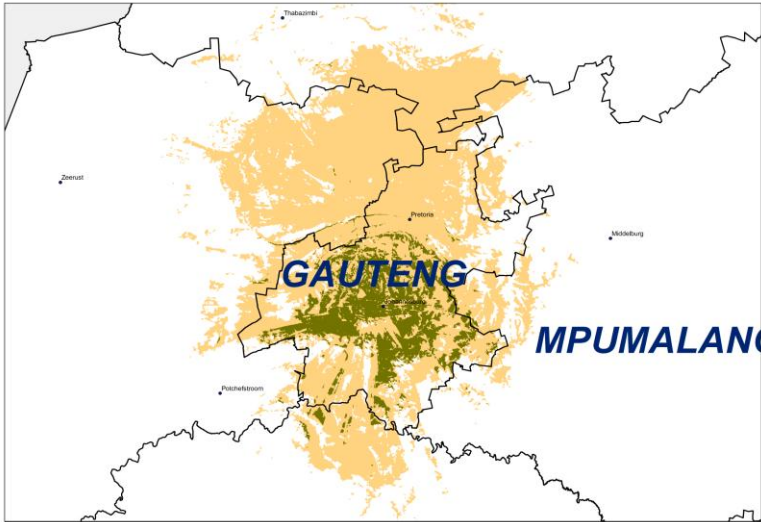

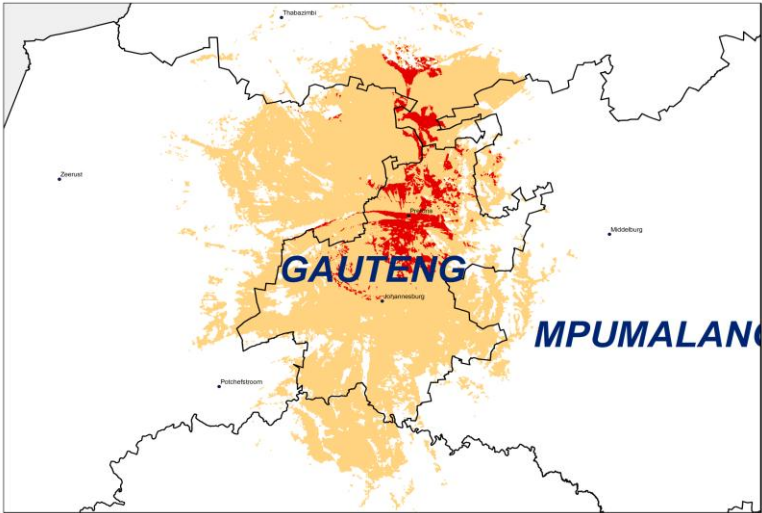

DTT coverage under current regulations:

- Still limited to metropolitan areas
- Coverage increases slightly with SFNs
- Highly inefficient use of spectrum on Mux 1
- Not aligned with universal access imperatives

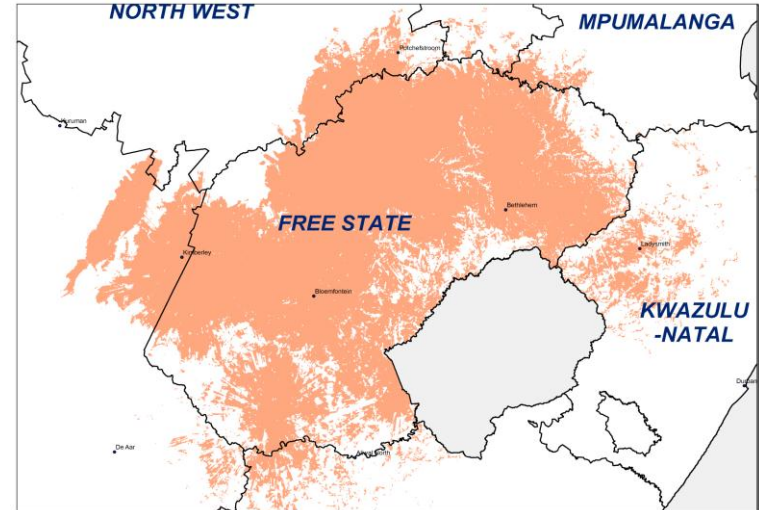

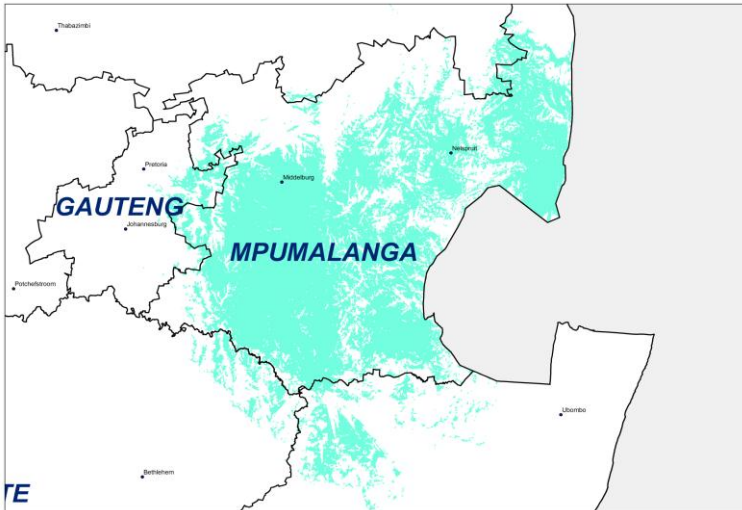

COMMUNITY TELEVISION: Coverage Under SENTECH Proposal

COMMUNITY TELEVISION: Coverage Under SENTECH Proposal

COMMUNITY TELEVISION: Coverage Under SENTECH Proposal

- Community broadcasters allocated 10% capacity on Multiplexor with only limited allocations have been made so far and with rural populations have not been catered for in local television (outside the programmes that may be generated by the public broadcaster);
- With respect to cost recovery, SENTECH is not in a position to recover the cost of the 10% Mux allocation in places where no such allocation has been made, from the incumbent broadcasters; as a result, SENTECH has to carry the cost of the rather insufficient mux allocation;
- SENTECH has made the following proposal in response to the draft regulations on DTT: *In regions where there are no community broadcasting services, SENTECH is of the view that an allocation of the spare capacity should be assigned to any interested broadcaster at regional level (i.e. minimum provincial coverage) in the spirit of efficiency, fairness and enhancement of competition in the broadcasting industry.*
- A similar problem arises on Multiplexor 2 where
 - ETV and MNET may not use all the spectrum assigned to them; this is normally addressed in broadcaster's license conditions and it is currently not clear what these will be; in the meantime, SENTECH is only intending to rollout Mux 2 in areas where one of the two sharing broadcasters requires coverage; the other will then have to follow, otherwise there will be under-recovery of costs;
 - 10% allocation for "test" purposes; there will be under-recovery as long as there is no allocation made to specific testers after ASO.
- The SENTECH proposals to the Shareholder with respect to community television broadcasters under DTT are as follows:
 - For incumbent broadcasters, with limited geographic footprints, applicable subsidies should be increased in line with the new cost dynamics facing these broadcasters;
 - For areas where there are no community broadcasters, the Regulator should be mandated to license regional commercial broadcasters who will make use of the 10% available capacity; this will be consistent with the BDM Policy as amended and universal access imperatives as contained in various other relevant policies.

SENTECH SOC Limited
